Instructions for authors

Article categories

EPJ E publishes Regular Articles, which are original research papers that report results in the domain of Soft Matter, Flows and Living Systems. Besides them, there also EPJ E publishes Colloquia, that describe the development of new areas of research or the impact of new and promising experimental or theoretical methods in the fields that are within the spectrum of topics covered by the journal. While not as extensive and complete as reviews in the usual sense, they are intended to suitably introduce new research directions and techniques in their early stages of development, and to a wider audience. There is no explicit constraint regarding the length of such manuscripts, although 20 printed pages would be the most usual length. Topical Reviews provide a comprehensive and extensive summary of recent research results in a field that is within the spectrum of topics covered by EPJ E and are of current interest to a broader audience. A topical review should aim to summarize the pertinent experimental, theoretical, and computational results obtained by the key research groups working in the field in the past 10 years. Historical reviews of an entire sub-field of physics are discouraged. There is no explicit constraint regarding the length of such manuscripts, although 35 printed pages would be the most usual length. All invited/submitted manuscripts will undergo the same refereeing procedure as all other contributions submitted to the journal. For invited colloquium papers, authors will receive a honorarium of EUR 400–500 upon publication and colour figures will be free of charge. Colloquium papers are generally solicited by the journal editors. Authors wishing to submit a colloquium paper are advised to contact J.M. Di Meglio.

Authors are asked to submit their paper electronically through the website (Inquiry System):
https://articlestatus.edpsciences.org/ls/epje/
Authors can eventually submit their manuscript via e-mail, but only through the Editorial Office at:
epje@edpsciences.org

How to prepare a manuscript

There is no general limitation of the overall size nor of the number of figures, nor of the level of details to be necessary. However, the appropriate length of a manuscript depends on the information presented in the paper. A manuscript should consist of the following content.

Title

The title should be simple, concise and informative with only the first word capitalized.

Author(s) name(s) and affiliation(s)

A list of all authors (with first and last name(s) written in full), as well as corresponding addresses, should be provided. Each address should be preceded by a numerical superscript corresponding to the same superscript after the name of the author concerned. Addresses should contain all information necessary for an effective mail delivery. E-mail should also be provided to speed up communication between readers and authors. This information will be published unless authors request otherwise.

Abstract

An abstract should accompany each manuscript; it should be completely self-consistent (i.e., with no figures or references) and should not exceed 200 words and written as a single paragraph. Mathematical expressions should be avoided, if possible.

Classification numbers

PACS numbers are not required since they are not of an explicit value. Unbroken long equations are thus placed at the top of the concerned page(s) by the production staff according to the page layout (1=10equations) with an appropriate citation in the text. For examples see eq. (8) above.

Footnotes

There are 3 main types of footnotes:
1. Introductory footnotes (referring to new addresses of authors, address of corresponding author, ...) indicated with the following lower-case letters: a, b, c, etc.
2. Footnotes to text material, which should be kept to a minimum, and which should be indicated by numerical superscripts: 1, 2, 3, etc. They should be placed at the foot of the relevant page.
3. Footnotes to tables, which should be indicated by superscript lower case letters and placed in a list immediately below the concerned table.

Acknowledgments and appendices

The acknowledgments section should follow the main body of the paper and should precede any appendix. Appendices should be labelled A, B, etc. (Appendix A or Appendix A. Complex developments, when there is a title). Equations in the appendices should be numbered consecutively, but separately from those in the main body of the paper (A.1), (A.2), etc. In each appendix equations should be numbered separately (B.1), (B.2), etc.

Author contribution statement (mandatory)

Please provide a statement at the end of the paper (after the Acknowledgments) in which the nature of the contribution of each author is made explicit.

References

It is important to check the accuracy of bibliographic information in references. This has become more important with the on-line version. Hyperlinks will be programmed to enable readers to jump directly to the material cited. If your reference citations are incorrect or incomplete (e.g., missing author name, or an incorrect volume number or page), the associated hyperlinks may fail, and the usefulness of your paper in the on-line environment may be diminished.

References are quoted with arabic numerals in square brackets in order of appearance in the text. Literature citation of periodicals [1-3], books [4], proceedings [5] and preprints [6] should be organized according to the following examples. Note that journal names should be abbreviated according to the list of serial title word abbreviation of the ISDS (International Serial Data System) if available, otherwise full journal names are preferable.

If necessary the DOI (Digital Object Identifier) of the cited literature may be added at the end of the reference.

IMPORTANT: To ensure that the CrossRef facility can hyperlink the articles quoted in the bibliography, multiple references must not be used. i.e., a list of references under the same number is not allowed: each reference has to be singly numbered.
Figure and table captions
Each caption should be written as a single brief paragraph without indentation. Figures and tables should be consecutively numbered with Arabic numerals as they are cited in the text.

Figures
Each figure should be cited in the text. The final quality of the illustration depends on the quality of the original artwork so that they must conform to the criteria given below.

- Letters, numbers and symbols should have uniform strength and contrast, should be appropriately oriented on the axes and consistent with those used in the text.
- Unnecessary text around, such as captions, figure number and author’s name should not be included in the files.
- The size of the figure should fit either one column width or full-page width. All details of the figure should be visible and legible, therefore:
  - make sure that the size of the lines is not lower than 0.3 pt,
  - if the figure contains thin dotted lines or too heavy lettering and thick lines that may result unsightly after reduction (if any).
- When supplying your PostScript files please strictly adhere to the standards given in the section Guidelines for submission after acceptance.
- Colour figures: By default, figures appear in colour in the electronic version but they are published in black and white in the paper version of the journal. Therefore, reference to colour coding in both captions and main text should be avoided unless absolutely essential for the description of a figure. In cases where authors would like to have their figures in colour in print as well, the journal will charge a flat fee of EUR 600 (+VAT) per article, without any limitation on the number of colour figures in that article.

Graphical abstract
EPJE features a graphical abstract that contains a graphic presentation for each published articles on www.epj.org, in addition to the title and author list. Before acceptance, authors are required to submit a graphic that, in conjunction with the paper title, is meant to convey the essence of the work and capture the reader’s attention. Please note that the graphical abstract is not an abstract and is not to provide specific results. It may be an item already present in the manuscript or a purpose-made graphic. If the paper has no graphic, the authors can create a new one (or use an equation). Of course, the submission of a new graphic abstract already used in the graphical abstract or in the contents of another journal publication is not allowed. The use of color is strongly encouraged. It should be of high visual quality in order to reproduce well.
The graphical abstract file should be created at publication size, ideally a graphic file (ONLY .jpg, .png) with a maximum width of 480 pixel.

Cover
Authors of accepted papers are encouraged to submit images for consideration as a cover. Cover images are linked to a specific paper in that issue. Illustrations are selected for their scientific interest and aesthetic appeal. Please send electronic files at the revision stage. Please also include a clear and concise caption explaining the image.

Electronic supplementary material
Electronically submitted articles (movies, songs, audio, etc.) and other supplementary information (appendices, tables, images, programmes, etc.) which is either too voluminous for printing or is deemed inappropriate for publication are encouraged (with .pdf, .ps, .eps, .jpg, .gif, .doc, .ppt, etc.). Make sure that your mailing software does automatically encode attached files (or use uun- code to do it manually). Good reception of the files will be acknowledged with the official acceptance letter sent by the Editorial Office.

The acceptance stage
In the case that the files have not been sent with the revised version, and before sending the official letter of acceptance, the Editorial Office will ask for the final electronic files (EPJX, EPJY Word) of the paper corresponding exactly to the pdf accepted by the editors.

Authors are informed that any missing element in an accepted article (electronic file of the text or of the figures) will delay the publication date. The Editorial Office will keep the paper on a waiting list until all missing material is provided. As long as no modifications can be made either to the text or to the figures, any manuscript will be sent back to the editor and possibly to the referees.

File formats
Text
We would appreciate receiving articles prepared in LATEX2e with the EPJ class. In this case, authors are requested to carefully follow the instructions detailed in the documentation and to adhere as much as possible to the rules given in the section How to prepare a manuscript. The macro package is available at www.epj.org.

We will, however, accept texts written with any common variant of EPJ, including EPJXe (standard, article class), EPJP and Word files.

No customized or personal style files should be used.

Also, no particular fonts should be used (authors are reminded that the journal will be printed with Computer Modern (CM) standard fonts). In any case, the PS-EPJX package, that defines several environments for creating multiline display equations, may be used. For manuscripts prepared with Word authors should be aware that only the text will be processed and that mathematical symbols and equations will be re-typed in EPJX by the Production Staff.

Figures
Remember that figures should be in separate files, and that no unnecessary text material (captions, figure numbers, author name, frames, etc.) should be included. The preferred macro package for including EPS graphics files is the EPJX “graphics” package.

- Vector Encapsulated Postscript (EPS) are welcome, although Postscript (PS) may also be sent. These files can be used directly to give high-quality results, provided the following rules are adhered to:
  - use standard fonts (Times, Helvetica, Courier, Symbol) and include them with the option saved “with fonts included” in the EPS file.
  - EPS files must not include a TIFF preview and should be in ASCII (not binary) format, the line strength should be greater than 0.3 pt (or higher if the figure needs scaling).
  - bitmap format such as PDF, TIFF, BMP, PNG and JPG are acceptable but they need to be transformed into EPS format in the production procedure. Bitmap images may present quality problems in the production of the printed version of the journal due to low resolution.

For this reason black and white graphics files should have a resolution of at least 600 dpi and greyscale graphics files of at least 300 dpi.

For extended instructions on how to prepare graphics please contact the Editorial and Production Office.

Sending your files
You can choose to send your material via the Editorial Office website: https://articlestatus.epj.apsciences.org/ls/epjep using the “Resubmit” menu. Or via e-mail at epj@apsciences.org using a single compressed file containing an archive of your text and figures. Text and figures should be archived in a single file using public domain software (with .zip, .gz, .pkzip, compress, etc.). Make sure that your mailing software does automatically encode attached files (or use uun-code to do it manually). Good reception of the files will be acknowledged with the official acceptance letter sent by the Editorial Office.

The proof correction stage
- Once proofs are ready, an e-mail will inform the authors on how to download them by visiting the CIOP inquiry facility (http://ciop.sif.it/). Should they meet with difficulties following this procedure, we will immediately send the proofs by e-mail (attached .pdf), fax or regular mail, as per authors’ request.
- Authors are asked to carefully check the proofs by following the guidelines for corrections they receive with the e-mail. They should keep in mind that the aim of proofreading is to correct errors that may have occurred during the production. Therefore they should particularly check completeness of text, equation breaks, figures, tables and references.
- Only essential corrections are accepted. Any substantial modification of the text or mathematical formulas altering the content of the accepted version of the paper might re-open the revision process.
- The author has the final responsibility for the corrections.
- Corrections should be returned within 48 hours and can be sent back either as a detailed list by e-mail (quoting the amendments location with page, columns and line number) or by fax. Please do not alter the PDF proof file, add annotations or send back an amended manuscript file.
- As soon as the proofs are returned, the paper will be corrected and posted for the on-line publication. Note that once the paper is published on-line, further changes and amendments cannot be accepted unless by submission of an Erratum.

Offprints
Authors will receive the PDF file (with cover) of their article for free as soon as it is posted for the on-line publication. Paper reprints can be ordered only on demand by contacting the Editorial Office.

Copyright transfer
The Editorial Office will give to the corresponding author, when sending the acceptance letter, the address to download a Copyright Transfer Statement. The signed Copyright Transfer Statement should be sent back to the Production Office (epje.bologna@sif.it) before publication. The Copyright Transfer Statement is also available at www.epj.org and it is sent as a separate file together with the proofs e-mail message.

Open access publishing
EPJ supports and encourages the publication of open access articles: for more information see this link.

Policy on publishing integrity
EPJ is committed to safeguarding good scientific practice in publishing at all levels. Strong measures will be taken in all cases of misconduct. For more information see this link.
